AeroSun™ Energy
--- Power from Sun and Wind ---

AEROSUN ENERGY PRIVATE LIMITED

SOLAR & RENEWABLE ENERGY SOLUTIONS

Power from Sun, Wind, Water, Fire..

PRODUCT & SERVICES CATALOGUE | 2026

Solutions for homeowners, farmers, businesses and institutions

CLEAN ENERGY PORTFOLIO

Power your future with clean energy

Energy requirements differ for every home, farm and business.

AeroSun Energy aims to provide customised renewable-energy solutions designed around electricity consumption, site conditions, available resources and customer requirements.

PORTFOLIO FOCUS

SOLAR ENERGY	WIND DEVELOPMENT	BATTERY STORAGE	INTEGRATED SYSTEMS

System options are assessed for each project; suitability and final configuration depend on technical and site review.

Clean energy for your home

Rooftop solar options planned around household electricity needs.

SUITABLE FOR

- Independent houses and villas
- Residential buildings and apartments (subject to suitable common-area arrangements)
- Residential properties with suitable rooftop space

POTENTIAL BENEFITS

- Renewable electricity generation
- Potentially lower grid purchases and reduced reliance on conventional energy
- Better rooftop use; optional battery backup when appropriately designed

SYSTEM OPTIONS

01 Grid-connected

Connected to the electricity grid, subject to applicable DISCOM approvals and regulations.

02 Off-grid

Solar combined with battery storage for independent electricity supply.

03 Hybrid

Solar integrated with suitable storage and grid or backup arrangements.

Capacity depends on electricity consumption, rooftop area, solar exposure, budget and applicable regulations.

Smarter energy for businesses

Rooftop solar can generate electricity for commercial and industrial operations.

SUITABLE FOR

Retail shops • Offices • Warehouses • Manufacturing units

Hotels • Hospitals • Educational institutions • Commercial buildings

SOLUTIONS

- Grid-connected commercial and industrial rooftop solar
- Solar for daytime energy consumption
- Hybrid solar with battery storage
- Customised energy assessment

POTENTIAL BENEFITS

- Potential reduction in electricity expenditure
- Better use of available rooftop space
- Reduced dependence on conventional electricity
- Improved energy planning and support for sustainability objectives

From energy review to commissioning

A coordinated process for commercial and industrial solar projects.

01 Understand
Electricity consumption

02 Review
Electricity bills

03 Assess
Site and rooftop suitability

04 Design
System configuration

05 Propose
Commercial proposal

06 Coordinate
Installation through qualified partners

07 Commission
Applicable checks and handover

Scope, system design and expected performance assumptions are prepared for the individual site.

Solar power for agriculture

For irrigation, water pumping, farm lighting and other suitable farm loads.

APPLICATIONS

- Solar irrigation pumps
- Agricultural water pumping
- Farm lighting and off-grid farm electricity
- Agricultural energy systems and rural applications

SYSTEM CONFIGURATIONS

01 Solar pump

PV modules supply electricity to a compatible agricultural pump.

02 Standalone

Independent solar system for suitable agricultural loads.

03 Hybrid

Solar plus battery storage or another compatible source.

Sizing requires review of pump capacity, water requirement, total dynamic head, water source, operating hours and site conditions.

Potential benefits include renewable solar use, reduced grid or diesel dependence, remote-site suitability and customised sizing.

Subsidies depend on current scheme rules, state allocation, eligibility, approved equipment and official sanction; they are not guaranteed by AeroSun Energy.

Independent energy for remote locations

Solar generation, battery storage and power conversion for suitable independent supply.

SUITABLE FOR

- Remote houses and farmhouses
- Agricultural fields and rural facilities
- Small commercial establishments and isolated buildings
- Suitable telecom and monitoring applications

SYSTEM COMPONENTS

- Solar PV modules
- Charge controller or compatible inverter
- Battery storage
- Protection equipment
- Distribution panel, wiring and accessories

DESIGN CONSIDERS

Connected load • Daily energy use • Peak demand • Backup duration
Solar resource • Battery capacity • Future expansion

An off-grid system is customised to demand and site conditions.

Store energy. Use it when needed.

Battery storage can support suitable solar systems and applications.

APPLICATIONS

- Residential and commercial backup
- Off-grid systems
- Solar hybrid installations
- Remote power applications

SELECTION PROCESS

- Customer load profile
- Backup requirements and energy capacity
- Battery chemistry and inverter compatibility
- Battery management and protection
- Warranty and service arrangements

STORAGE OPTIONS

Battery selection depends on the application and may include suitable lithium-based or other compatible battery technologies.

Potential benefits: energy storage, backup electricity, better use of solar generation and support for off-grid operation.

Small wind-generator development

Customised product direction for decentralised electricity requirements.

PROPOSED DEVELOPMENT RANGE

100 W – 10 kW

PRODUCT DEVELOPMENT FOCUS

- Customised generator capacities
- Permanent-magnet generator technology
- Vertical-axis turbine concepts
- Mechanical and electrical integration
- Low-wind-speed performance investigation
- System monitoring and testing

INTENDED APPLICATIONS

- Agricultural properties
- Rural locations
- Remote facilities
- Small businesses
- Suitable distributed-energy installations

The range and product performance are under development and require engineering validation and testing.

AeroSun AS-WG-3000

Flagship 3 kW hybrid vertical-axis wind-turbine development project.

PROPOSED CONFIGURATION

- 3 kW target electrical output
- Hybrid Savonius–Darrieus vertical-axis turbine
- Three external helical Darrieus blades
- Central Savonius starter rotor
- Direct-drive permanent-magnet generator concept
- Electrical power conversion and protection

DEVELOPMENT STATUS

Rated output, starting wind speed, power curve, efficiency, reliability and operating limits remain subject to engineering validation and physical testing.

Solar–wind hybrid energy systems

Two renewable sources can complement one another under suitable environmental conditions.

PROPOSED SYSTEM ARCHITECTURE

- Solar PV modules
- Wind generator
- Compatible power conversion equipment
- Battery storage
- Energy management system
- Electrical protection, monitoring and control

SUITABLE APPLICATIONS

- Farms
- Remote buildings and rural facilities
- Small commercial operations
- Off-grid installations
- Suitable institutional applications

Potential benefits include two-source renewable generation, diversified supply, battery integration and a customised energy architecture.

A hybrid system does not guarantee uninterrupted power unless generation, storage, load management and backup are properly designed.

Renewable-energy consultation & feasibility

Make an informed energy investment by understanding actual requirements first.

- Electricity consumption assessment
- Solar rooftop suitability assessment
- Wind-resource assessment coordination
- Agricultural energy requirement assessment
- Off-grid and solar–wind hybrid feasibility
- Preliminary system sizing and equipment selection
- Project cost and energy-generation estimation

Assessments and estimates are preliminary until validated for the specific site, selected equipment and project scope.

A clear project development process

01 Customer enquiry
Understand energy needs.

02 Requirement assessment
Review bills, loads and usage patterns.

03 Site evaluation
Review rooftop, land, solar exposure, wind and installation needs.

04 System design
Prepare a suitable preliminary technical configuration.

05 Commercial proposal
Share estimated cost, scope and performance assumptions.

06 Procurement & execution
Coordinate procurement and installation through qualified partners.

07 Testing & handover
Complete applicable checks, commissioning and customer handover.

WORKING TOGETHER

Why choose AeroSun Energy?

A customer-oriented approach built around actual project requirements.

- Solar and wind energy solutions
- Customised system planning
- Agricultural and rural applications
- Small wind-generator development
- Solar–wind hybrid technology
- Equipment integration
- Quality-conscious supplier selection
- Customer-oriented technical assessment

We aim to plan around customer requirements rather than offer one configuration for every application.

LET'S DISCUSS YOUR ENERGY REQUIREMENTS

AEROSUN ENERGY PRIVATE LIMITED

Power from Sun, Wind, Water, Fire.

D. No. 11-184, Gollavanigunta, T.N. Pallem, Tirupati, Andhra Pradesh – 517501, India

https://aerosunenergy.in/ | customercare@aerosunenergy.in | +91 8099181075

Homeowners, farmers, business owners and institutions are welcome to discuss suitable renewable-energy options.

PROJECT BASIS:
All systems are subject to technical feasibility, site conditions, applicable approvals and equipment availability. Specifications, savings and generation estimates depend on individual project assessment. Government incentives and subsidies are subject to current official scheme rules and approval.
